

COMPACT LEADER SOLUTION FOR PM16

Expand the capabilities of your Junttan PM16 pile driving rig with our innovative short leader module. This cutting-edge modernization enhances the PM16's versatility, making it ideal for operations in environments with height restrictions. By shortening the mast, the rig's operational range is significantly widened. When paired with the HHK3A hammer, the short leader module allows for a minimum working height of 10 meters and accommodates piles up to 5 meters long in the 10-meter setup. The design also permits substantial forward inclinations.

KEY BENEFITS

- Suitable for piling in low-headroom spaces or restricted environments
- easy installation, compatible with all pm16 rigs
- seamless switch back to original leader configuration
- enhanced forward inclination capabilities
- facilitates unloading piles from trailers like a standard leader
- transportable with the attached hammer and reduced transport length

MAIN COMPONENTS & OPTIONS:

- Short leader module
- Special cathead
- Special HHK3A hammer version with 800 mm stroke
- Hammer extensions available
